Ask the person to smile. Does one side of the face droop?

Ask the person to repeat a simple phrase. Does the speech sound slurred or strange?

If you observe any of these signs, it's time to call 911.

HOW TO CALCULATE SQUARE INCHES

DIE CUT ON DOTTED LINE

7 1/2"

8"

**Maximum Length
X
Maximum Width
= Total Square Inches**

8" x 7 1/2" = 60 square inches

Determine the total number of square inches then locate the appropriate square inch bracket on the desired custom page. Follow the pricing across to the quantity desired. Die charges are necessary when ordering irregular shapes. No charge for artwork.

- Multiply length times width for total square inches.
- Count number of colors. White must be priced as a color on clear.
- Determine quantity.

Intermediate Quantities: To price quantities between the standard quantities shown, use the unit rate for the next lower quantity. For example, 200 units price at the 125 unit rate; 400 units price at the 250 rate, etc.

Contact Customer Service on quantities or sizes not shown.

9. REPEAT ORDERS

Identify repeat orders with the previous order number and the year it was produced. Orders are retained on file for three years. A sample will be needed for repeat orders more than three years old.

10. WHITE BACKUP ON CLEAR MATERIAL

When printed on clear material, we recommend backing the imprint with white for better readability. This can be done three ways: a halo around the image area (a small outline of white will show), slightly inside the image area (not available on small type or fine detail), or a white background. Please submit your artwork with a white plate for this white backing.

A complete email address must be provided. Email proof colors will vary based on your computer system or printer. Refer to page 171 or Pantone® chart for colors.

13. PRODUCTION TIME

Production time begins after receipt of complete order including art, in catalog quantities or after proof approval. Check with Customer Service about production time above catalog quantity. Changes made to an order in progress could result in a later ship date.

Expedited Service: An extra charge may be required to expedite an order to ship in less than normal production time. Contact Customer Service each time this service is needed to discuss customer requirements and our ability to meet them given current production conditions.

14. SAMPLES

Material samples are always available at no charge for testing. Because of the wide variety of uses of our materials, we would like to ensure that the right product or material is used for a particular application. Artwork Info

1. ART TEMPLATES

Art templates are available at www.gill-line.com. Templates illustrate correct bleed and margin size. The majority of custom items require 1/8" bleed past the cut line and 1/8" copy margin inside the cut line.

2. SOFTWARE FORMATS

PREFERRED

Adobe Illustrator

Export files as EPS or PDF.

ACCEPTED

Adobe InDesign

Export files as EPS or PDF.

Adobe Photoshop

Export files as PDF or PSD.

Note: Support files must contain: vector art, high resolution (300 dpi) images at finished imprint size for halftones and postscript fonts. PDF is the preferred file format that enables art files to process efficiently.

3. FONTS

Outlined fonts are preferred. If this is not possible, send fonts with files.

4. COMPRESSION

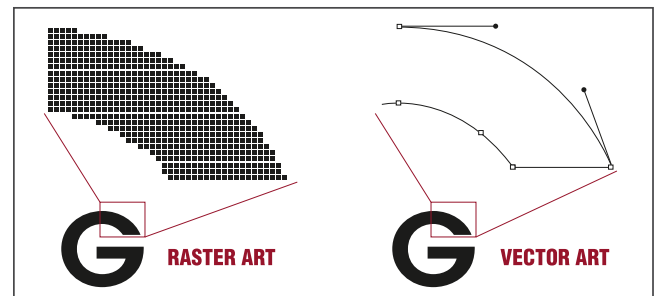

Stuffit® and WinZip®

5. VECTOR ART

Vector art is resolution independent, meaning it can be enlarged without reducing image quality. This is the preferred format for all artwork. All type should be converted to outlines to avoid potential font problems.

6. RASTER ART

Raster art is resolution dependent, meaning it cannot be enlarged without reducing the image quality. To ensure optimal print quality, TIFFs are used with spot color or full color artwork. Create at 300 dpi on the final print size. Art should be sent as CMYK for full color artwork.

7. VIRTUAL SAMPLES

Stock shape items have an easy-to-use virtual sample program within product pages at www.gill-line.com that lets you, or your customer, upload and edit artwork.

Each product is set up with its own specific imprint area and when a logo is uploaded to that product it will automatically be resized to properly fit in the area. In addition, a white background can be removed in one step, the logo can be colorized, and the text can be added and edited. Create perfect virtual samples every time!

MATERIAL INFO

1. ADHESIVE VINYL MATERIALS

Vinyls are flexible, scuff resistant, plasticized films that will stretch and shrink slightly. They are for indoor or outdoor use. Note: Yellow Vinyl is pigmented material and is not the same color as 10 Primrose or 12 Medium Yellow.

2. ADHESIVE POLYESTER MATERIALS

Polyesters are very “dimensionally stable” and will not stretch or shrink. Therefore, they do not conform well to irregular surfaces or compound curves. They are very resistant to chemicals. Polyesters are suited for indoor or outdoor use.

3. STATIC CLING VINYL MATERIALS

Cling vinyl is a highly plasticized vinyl film that does not require an adhesive to adhere to polished or smooth surfaces such as glass or mirrors. This material is recommended for indoor use only.

4. PAPER & POSTER RELATED MATERIALS

Papers are used for a variety of products. Some recycled materials are available. Refer to specific catalog pages for more information. Pressure sensitive papers and films include white and yellow gloss papers, neon papers, gold and silver foil papers, and clear styrene. These materials are intended for indoor use. Plastic coated white poster board is suitable for short-term outdoor use.

5. MAGNETIC MATERIAL

Our magnets consist of a base magnetic material with a vinyl film suitable for screen, digital or offset printing. The base magnetic material has good holding power on most metal surfaces. All magnets are suitable for indoor or outdoor use.

6. REFLECTIVE MATERIAL

Microscopic spheres embedded in the material allow light to reflect to its source revealing reflective properties shining through the ink. Choose from Red, Blue, Orange, Green, Yellow, Purple, Magenta, Teal and Gold transparent inks. This material is appropriate for indoor or outdoor use.

7. PLASTIC MATERIALS

Several plastics are used on our products. Corrugated plastic, 23, 35, and 55 point plastic and opaque polyethylene are the only plastics suited for outdoor use. These plastics are recyclable. Refer to specific catalog pages for more information.

8. BANNER MATERIAL

Reinforced vinyl banner is intended for short-term outdoor use (6 months or less) or indoor use. This material is typically printed using our UV digital inks. Final product includes finished ends and grommets attached for easy hanging.

ADHESIVE INFO

1. PERMANENT ADHESIVE

Permanent adhesive will become difficult to remove from most surfaces approximately 72 hours after initial application. Once bonded, adhesive residue or transfer will occur when removing from surface.

2. REMOVABLE ADHESIVE

Removable adhesive has considerably lower tack and strength than our permanent adhesive, while providing clean removability from most surfaces.

3. ULTRA REMOVABLE ADHESIVE

Ultra Removable adhesive is the easiest to remove. This adhesive is designed for clean removability for at least one year after application. Ultra removable is our most popular removable adhesive.

Each product in the Gill-line has been designed to offer the best combination of material and adhesive. Refer to specific catalog pages for material and adhesive combinations. Contact Customer Service for unique options not in our catalog or on our website.

Gill-line offers products printed by: screen, flexo, offset, or digital

SCREEN PRINTING - Inks are ultraviolet (UV) light cured, pigmented colors. They are glossy and very resistant to chemicals and abrasion. All colors with the exception of neon colors average 3 to 5 years outdoors. Neon colors will begin to fade in approximately 30 days if exposed to direct sunlight. Transparent inks average 2 years outdoors. They are typically used on substrates that allow the properties of the base material to show through the ink. Four-color process inks average 3 years outdoors. A clearcoat is available as an additional color. It can be used for extra chemical or abrasion resistance or to add a glossy appearance to four-color process inks. Outdoor durability of most Pantone® colors will average 3 years with the exception of the neon colors.

FLEXO PRINTING - Inks are water based for standard colors and UV cured for four-color process. All formulations are made with lightfast pigments. Flexo items are typically printed on paper and are intended for indoor use only. Flexo labels that require scuff resistance or that will be used for product packaging such as shampoos, soaps, and oils need either a UV cured clearcoat or overlamination for protection.

OFFSET PRINTING - Inks are UV cured and strong in color to compensate for thinner ink film thickness applied. They create high quality images for four-color process printing and are outdoor durable for at least 12 months.

DIGITAL PRINTING - UV inks are used in our digital presses. These inks are designed to adhere to a wide variety of flexible and rigid substrates as well as to be used indoors and outdoors. Accelerated weather tests have shown inks to be outdoor durable for the equivalent of approximately 24 months in a temperate climate. Ultimate durability will be determined by the substrate and/or use of the product.
